

A powerful channel manager for any property

Increase your property's visibility, maximise occupancy and grow your revenue when you connect to the world of online distribution channels.

HiSITE offers innovative technology with two-way integration. In today's market, we understand the importance of instant updates with real-time rate and room availability distribution. Suitable for all accommodation segment types and business sizes, from one property listing to 1,000; from hotels and resorts to caravan parks and marinas; real estate agencies to vacation rentals and B&Bs or snow chalets.

We don't expect businesses to fit into us, we tailor our software to work for your business. HiSITE's in-built yield management tool helps you have full control over the fluctuation over your business or property inventory and rates, whilst maximising your booking revenue.
